

New!

Cut your fuel costs by at least \$2700 per year!

It's a single source solution for CARB compliance

Silver Eagle Aero Saber Trailer Skirt Fairings are a SmartWay verified technology shown to cut fuel consumption by at least 5.7%. You'll keep more of your hard-earned cash and could **save \$40,500** in fuel costs over the life of your trailer when you add Silver Eagle Aero Saber technology to your fleet today.

Plus, when you add Silver Eagle Aero Saber skirts to your 53-ft trailer carrying freight into California, you'll immediately **comply with stringent California Air Resources Board (CARB) legislation** now in effect.

Win-Win! Aerodynamics for fuel savings and higher clearance for easier driving!

Silver Eagle offers the highest ground clearance of all SmartWay-verified technologies — 18" of ground clearance (8 inches of unobstructed and 10 inches of flexible material). Never be concerned about steep ramps or road obstacles because Silver Eagle Aero Saber skirts won't come in contact with them.

A flexible wall and 18" of ground clearance allows you to maneuver over obstacles that would come in contact with other aerodynamic skirts.

Good for your wallet, good for the environment, too!

Not only does the Silver Eagle Aero Saber increase your tractor/trailer fuel efficiency, it's also good for our environment. It's constructed of 90% recycled materials — aluminum and steel. And is 100% recyclable at the end of its usable lifetime.

AERODYNAMIC FUEL SAVINGS POWERED BY

Aero Saber
SILVER EAGLE MANUFACTURING COMPANY

© 2011 Silver Eagle Manufacturing Co. Savings per trailer calculated on 5.7% fuel savings, 100,000 miles per year, 6 m.p.g. baseline, \$3 per gallon fuel and 55 mph average speed. \$40,500 savings is calculated on a trailer in use for 15 years. Your results may vary.

Cut your trailer's drag, slash your fuel costs with Aero Saber

Silver Eagle Aero Saber skirts work by streamlining the way winds act upon your trailer. Basically, Aero Saber skirts keep the wind along the outside of your trailer, rather than under it, thereby increasing its aerodynamic efficiency.

Aero Saber gives you an edge when it comes to increasing your fuel economy, since approximately 75% of your tractor/trailer's drag comes from the trailer and that drag negatively impacts your fuel economy. These skirts just make sense for long haul truckers because they:

- Increase fuel efficiency by 5.7%
- Offer the highest ground clearance of any skirt
- Are ergonomically designed for easy, convenient use

Designed for truckers by a trusted trucking company

Silver Eagle Aero Saber works with intermodal. Simply order an intermodal kit to make your Aero Saber intermodal compatible.

Run reefers? Aero Saber can accommodate. Simply use the modified template included in your Aero Saber installation kit.

With a hinged lead out panel, the Aero Saber gives you easy access to the under side of your trailer and to your rear tandem for fast adjustments.

Steep loading docks are no problem for the Aero Saber. With the highest ground clearance in the industry, you can approach any loading dock with confidence.

With 18" of ground clearance, a shop creeper can easily be slid underneath the skirt, making trailer maintenance and border checks easy.

Dimensions and Specifications

Fuel Efficiency:	5.7%
Panels:	6
Skirt Length:	341 in (866.1 cm)
Skirt Height:	36.5 in (92.7 cm)
Outer panel thickness:	.063 in (.2 cm)
Weight:	390 lbs (176 kg) per set
Panel Material:	Aluminum with corrosion resistant coating
Color:	White
Ground Clearance:	18" (25.4 cm); 10 inches flexible extension, 8 inches unobstructed on a fully laden trailer
Installation:	Approximately 4 hours
